

RESTRICTING FLAVORS

70,000 Utah teens have admitted to trying e-cigarettes.

80% of kids who use tobacco started with flavored products.¹

There has been a steady rise in the use of e-cigarettes among Utah's youth. This is concerning for two reasons: 1) the high levels of nicotine can damage the developing brain; 2) research shows that youth e-cigarette use can lead to traditional tobacco use later in life.

This bill will restrict **youth** access to flavored tobacco and e-cigarette products.

Utah **adult** smokers will be able to continue to purchase their e-cigarette flavors at age-restricted specialty tobacco retailers.

84% of youth reported that they would not use e-cigarettes and other tobacco products if they were not flavored.

There are currently **no restrictions** on the flavoring of e-cigarette products. This has resulted in the production of over **15,500** e-cigarette flavors.²

60% of adult smokers in Utah support a policy restricting the sale of flavored tobacco products.
